No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                             January 3, 2006, 09:20:09; Search time 12.1429 Seconds (without alignments) 10.484 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 31, A Sequence 38, A Sequence 773, Sequence 771, Sequence 771, Sequence 777, Sequence 774, Sequence 779,

Phenylalanine amide (G-93 provides amide
   SUBCELLULAR LOCATION: Secreted.

PTM: Two different processing pathways probably exist in antral G-cells. In the dominant pathway progastrin is cleaved at three sites resulting in two major bioactive gastrins, gastrin-34 and gastrin-17. In the putative alternative pathway, progastrin may be processed only at the most C-terminal dibasic site resulting in the synthesis of gastrin-11.

PTM: Sulfation of Tyr-87 blocks peptide degradation and enhances
           Am. J. Physiol. 279:G903-G909 (2000).

-!- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its digestive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach and intestine.

Three asparagine synthetase genes of Bacillus subtilis.";
J. Bacteriol. 181:6081-6091(1999).
I. FUNCTION: Asparagine synthetase involved in sporulation.
I. CATALYTIC ACTIVITY: AFP + L-apparate + L-glutamine = AMP +
dlphosphate + L-asparagine + L-glutamate.
I- PATHWAY: Asparagine biosynthesis.
I- SIMILARITY: Belongs to the asparagine synthetase family.
I- SIMILARITY: Contains 1 type-2 glutamine amidotransferase domain.

This Swiss-Prot entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its
   use as long as its content is in no way modified and this statement is not
  DNA Res. 9:123-130(2002).

-!- CATALYTIC ACTIVITY: ATP + L-citrulline + L-aspartate = AMP +
diphosphate + (N(omega)-L-arginino)succinate.
-!- PATHWAY: Arginine biosynthesis; seventh step.
-!- SUBUNIT: Homoterramer (By similarity).
-!- SUBUNIT: Belongs to the argininosuccinate synthase family. Type
1 subfamily.

Sequence 17, Application US/09079372

Sequence 17, Application

GENERAL INFORMATION:

APPLICANT: Singh, Pomila

APPLICANT: Wood, TINHIBITION OF ENDOGENOUS GASTRIN

TITLE OF INVENTION: EXPRESSION FOR TREATMENT OF COLORECTAL CANCER

NUMBER OF SEQUENCES: 17

CORRESPONDENCE ADDRESS:

ADDRESSE: ALMOId, White & Durkee

STREET: P.O. Box 4433
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 5
US-08-488-351A-74
US-08-488-351A-74

Sequence 74, Application US/08488351A

Patent No. 5843446

GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Zamb, Timothy
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEQUENCES: 114
CORRESPONDENCE ADDRESS:
ADDRESSER: Maria C.H. Lin
STREET: 345 Park Avenue
CITY: New York
STATE: NY
COUNTRY: US
EID.
                                                                                                                                                                                                       Sequence 74, Application US/08446692

Patent No. 6849714

GENERAL INFORMATION:

APPLICANT: Conjuchem, Inc.

APPLICANT: Earin, Alan

APPLICANT: Holmes, Darren

APPLICANT: Holmes, Darren

APPLICANT: Holmes, Darren

APPLICANT: Holmes, Darren

TITLE OF INVENTION: PEPTIDASE ACTIVITY THROUGH CONJUGATION TO BLOOD

TITLE OF INVENTION: COMPONENTS

TITLE OF INVENTION: COMPONENTS

TITLE OF INVENTION: COMPONENTS

TITLE OF INVENTION NUMBER: US/09/623,548A

CURRENT APPLICATION NUMBER: 60/134,406

PRIOR APPLICATION NUMBER: 60/133,406
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                               GENERAL INFORMATION:
APPLICANT: Singh, Pomila
APPLICANT: Wood, T.
TILE OF INVENTION: INHIBITION OF ENDOCENOUS GASTRIN
TITLE OF INVENTION: EXPRESSION FOR TREATMENT OF COLORECTAL CANCER NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESS:

Patent No. 5843446
GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Wang, Chang Yi
APPLICANT: Zamb, Timothy
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEQUENCES: 114
                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 7, Application US/09079372

Patent No. 6165990

GENERAL INFORMATION:
APPLICANT: 8109h, Pomila
APPLICANT: 8109h, T.
ITILE OF INVENTION: INHIBITION OF ENDOGENOUS GASTRIN
ITILE OF INVENTION: EXPRESSION FOR TREATMENT OF COLORECTAL CANCER
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESS:
ADDRESSE: Arnold, White & Durkee
STREET: P.O. Box 4433
CITY: Houston
STATE: Texas
COUNTY: United States of America
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Sequence 7.5. Application US/08488351A

Sequence 7.5. Application US/08488351A

Patent No. 584346

GENERAL INFORMATION:

APPLICANT: Ladd, Anna

APPLICANT: Zamb, Timothy

TITLE OF INVENTION: Immunogenic LHRH peptide constructs

TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines

NUMBER OF SEQUENCES: 114

CORRESPONDENCE ADDRESS:

ADDRESSE: Maria C.H. Lin

STREET: 345 Park Avenue

CITY, New York

Sequence 75, Application US/08446692

Patent No. 5759551

GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Anna, Chang Yi
APPLICANT: Anna, Timothy
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
CORRESPONDENCES: 114

NUMBER OF SEQUENCES: 114

CORRESPONDENCE ADDRESS:
ADDRESSEE: Maria C.H. Lin
STREET: 345 Park Avenue
CITY: New York
STATE: NY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           윱
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 100, Application US/08488351A
Patent No. 5843446
GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Ladd, Anna
APPLICANT: Zamb, Timothy
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEQUENCES: 114
CORRESPONDENCES: 114
ADDRESSER: Maria C.H. Lin
STREET: 345 Park Avenue
CITY: New York
                                                                                                                                                                                                               | Sequence 100, Application US/08446692
| Patent No. 5759531
| GENERAL INPORMATION:
| APPLICANT: Wang Vi
| APPLICANT: Wang Vi
| APPLICANT: Wang Vi
| TILLE OF INVENTION: Immunogenic LHRH peptide constructs

```
The present sequence represents carboxy-amidated gastrin-17. Treatment of gastrin-17-dependent gastrointestinal tumours comprises administering to immunogen an anti-gastrin 17 (G17) immunogenic composition. Anti-G17 immunogens raise anti-dodies which bind both the amidated and glycine-extended forms of G17. Neutralisation of progastrin G17-G1y prohormone by the antibodies inhibits the growth of tumour cells dependent on progastrin G17-G1y as growth stimulator or inducer. The method is especially for the treatment of colorectal adenocarcinomas in humans. This novel method is non-invasive, selectively reversible, does not damage normal tissue, does not require frequent repeated treatments and does not cross the blood brain barrier
The invention relates to the obtaining of a potent agonist or antagonist peptide by the replacement of selected amino acids with synthetic achiral amino acids. The present sequence represents a gastrin fragment analogue, where at least one of Tyri2 and Phe17 is intended to be replaced by N-benzylgiycine, N-cyclohexylmethylglycine or the ring substituted
                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Treatment of glycine-extended gastrin-17-dependent gastrointestinal tumours - using anti-G17 immunogenic composition, especially for treatment of colorectal adenocarcinomas.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the sequence represents a synthetic biotinylated peptide substrate for human Janus kinase 3 (JAK3). The invention relates to the use of JAK/STAT (Janus kinase/signal transducer and activator of transcripton) inhibitors other than debromohymenialdisine (DBH) and hymenialdisine (H) inhibitors other than debromohymenialdisine (DBH) and hymenialdisine (BH) cor inhibiting the progression or the likelihood of developing diseases inflammatory agents or cytokines in a chondrocyte, and cartilage captaing progression or likelihood of developing cartilage degradating progression or likelihood of developing consecut inhibiting progression or likelihood of developing consecut inhibiting progression or likelihood of developing consecution is useful for inhibiting progression or likelihood of developing consecution in the captain of the line invention is useful for inhibiting progression or likelihood of developing consecution inhibiting progression or likelihood of diseases. Including the creating other JAK/STAT-mediated diseases or disorders, including r cell-mediated disorders include human T cell leukamia/lymphoma virus. (HTLV)-1, Gatory's syndrome, c-abl transformation, natural killer-like T cell lymphomas (NR-like tumours) and graft-vehost diseases. T cell lymphomas (NR-like tumours) and graft-vehost disease, cytokine bypersensitivity disorders include Leishmaniasis, leprosy, allergy and virul infections; mast cell-mediated disorders include by fever, asthma, trail infections; mast cell-mediated disorders include and such order lymphobalsatic leukamias and lymphomas and lamphomas and lamphomas and leukamias of myeloid origin. DBH and H are useful as therapeutic agents in cancers

```

```
The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (III) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases intracellular uptake and interference with physiological processes. AABS0829 to AABS2441 represent peptides which can be used in the exemplification of the present invention
                                                                                                                               Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protection, endogenous therapeutic peptide; peptidase; conjugation; blood component; modification; succinimidyl; maleimido group; amino; hydroxyl; thiol; hormone; growth factor; neurotransmitter.

          ö
                                                                                                                                                                                                                                                                                                                                                                      Assay for detecting phosphorylation and dephosphorylation modification of proteins by contacting luminescence peptide with a binding partner and measuring change in luminescence polarization.
                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to detecting addition or removal of a phosphate group to or from a substrate. The method involves contacting a luminescent peptide with a binding partner that binds specifically to a phosphorylated peptide without regard to the particular amino acid sequence of the peptide. The method is useful for detecting phosphorylation and dephosphorylation modifications of proteins, including kinases and phosphatases. The methods can be used to study the kinase activity of different receptors e.g. the insulin receptor and to find agonists and antagonists of these receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The invention relates to a reagent (I) for incorporation of a phosphorylation site by reaction with a reactive side chain of a compound to be phosphorylated. (I) comparises a structure A.B-C, where A is a moiety that is specifically reactive with a reactive side chain, C is a moiety that is specifically reactive with a reactive side chain, C is a peptide sequence comprising kinase substrate, and B is a linking moiety selected from any one of the 19 compounds given in the specification e.g. N-gamma—maleimidobutyryloxy-succinamide ester. (I) is useful for phosphorylation, by reacting (I) with a compound to be phosphorylated compressing a protein kinase under phosphorylating the resulting comprising 32P-phosphate or 33P-phosphate. The phosphorylated compounds are useful in assays such as drug discovery. The method is suitable for radioactively phosphorylating already synthesised proteins, without the cast or carry out recombinant methods to incorporate an amino acid sequence. The method is highly adaptable and can be used to phosphorylate or sequence. The method is highly adaptable and can be used to phosphorylation sites in proteins is possible merely by a codiction of proteins having an inaccessible kinase substrate sequence as can result from known recombinant methods. Introduction of reagent to protein site possible merely by computating does not interfere with the protein's function or become increasible as a result of protein folding. The method allows labeled companding that have a higher specific activity that is commally obtained with recombinant methods unbetrate used in examples that demonstrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                             Reagent for phosphorylating a compound, comprises a moiety that is specifically reactive with reactive site chain of the compound, a linking moiety and a peptide sequence comprising kinase substrate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New disubstituted pyrazine useful for treating a protein kinase associated disorders e.g. allergic asthma, rheumatic disease, systemic lupus erythematosus and rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to bisubstituted pyrazine compounds. The compounds potentially modulates protein kinase signal transduction by affecting the enzymatic activity of RTKs, CTKs and/or STKs mediated signal transduction pathways. The present sequence represents biotinylated substrate biotin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      100.0%; Score 103; DB 8;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel method for immobilizing a functional organic molecule in a predetermined density on a mixed monolayer surface (MMS). The novel method comparises a first monolayer modery (MMI) having a covalent bond forming reactive group and a second monolayer modery (MM2) having an inert group. The method involves contacting MMS with the functional organic molecule and MMI to immobilize the functional organic molecule and MMI to immobilize the functional organic molecule and MMI to immobilize the functional organic molecule in a predetermined density on a mixed monolayer surface, where the functional organic molecule is selected from coligopeptides, peptides, polypeptides, oligonacie oligonucleosides, nucleosides, carbohydrates proteins, nucleosides, nucleosides, carbohydrates, proteins, nucleosides, and small molecules, but preferably a carbohydrate. The carbohydrate comprises a reducing end, the reducing end comprises a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Immobilizing functional organic molecule in a predetermined density on a mixed monolayer surface, by contacting the surface with the organic molecule to form a covalent bond and to immobilize the organic molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              peracetylated sugar having an n-pentenyl group. This sequence represents a peptide which binds to the chemoselective self-assembled monolayer's (SAM's) at the E-terminal, relating to the novel method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                      The invention relates to disubstituted pyrazines of specified formula.

The novel compounds are potent modulators of protein kinases (such as tyrosine kinase and serine/threonine kinase) mediated signal transduction pathways. They are used for treating a protein kinase (such as a receptor tyrosine kinase (e.g. EGF, HER2, HER3, HER3, IR, IGF-IR, IRP, PDGFR-C alpha, PDGFR.beta, CSFIR, C-Kit, C-fms, FIk-IR, FIk4, KDR/FIk-1, FIL-1, CFFR-1R, FGFR-2R, FGFR-3R, FGFR-4R), Cellular tyrosine kinase (e.g. Src, CFK, Btk, CGK, Abi, ZAP70, FE9/Fps, Fak, Ack, Yes, Fyn, Lyn, Lck, Blk, CK, Fyr and Yrk), a tyrosine kinase (e.g. JAK1 - JAK3, TYK2) and a serine/threonine kinase (e.g. GFK2, c-jun, p38MAFK, PKA, PKB, PKC, a cyclin-dependant kinase (e.g. GFK2, c-jun, p38MAFK, PKA, PKB, PKC, a cyclin-dependant kinase, CDK. - CDK11) associated disease state e.g. atopy (e.g. allergic asthma, atopic dermatitis (Eczema), allergic chinitis); cell mediated hypersensitivity (e.g. allergic contact corrected and hypersensitivity peumonitia); rheumatic disease (e.g. cyclin-dermatic arthritis, other autoimmune disease (e.g. Type I diabetes, autoimmune thyroid disorders, and Alzheimer's disease), viral disease (e.g. Epstein Barr Virus (EBV), hepatitis C, HIV, HILV II, CC, Varicella-Zoster virus, human papilloma virus), and cancer (e.g. Leukemia, lymphoma and proseter cancer). The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                              New disubstituted pyrazines useful for treating protein kinase associated disorders, e.g. allergic asthma, rheumatic disease, systemic lupus erythematosus and rheumatoid arthritis.

The present invention relates to injectable liposomal compositions (I) for delivery of a water-soluble substance e.g. immunomimic peptides. (I) comprises several liposomal vesicles comprising a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high efficiency of encapsulation. The immunomimic peptide is chosen from gastrin G-17 (ADH892056 to ADH89213), gastrin G-34 (ADH89217-ADH89219), and human chorionic gonadotropin (hCC) peptide (ADH89221-ADH89224), and human chorionic gonadotropin (hCC) peptide (ADH89221-ADH89222). (I) comprising vaccines directed against hormone or hormone cognate receptors, where the vaccine comprises at least one: creating gastroincesting and and allowance in a gastrin G-17 or G-34 is useful for treating gastroincestinal tumors such as thyroid and lung cancer; or GaRH or hCG immunomimic peptide is useful as contraceptive and for treating cancers in male and female
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Injectable liposomal composition for delivery of a water-soluble substance e.g. vaccine for preventing pregnancy, comprises several liposomal vesicles comprising a high weight ratio of lipid to encapsulated water-soluble substance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               T helper cell epitope, B cell epitope, Antibacterial, Antiulcer, Antinfertility; Vaccine, antibody.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention realtes to a lipopeptide comprising polypeptide conjugated to lipid moleties, where polypeptide contains amino acid sequences of T helper cell epitope and B cell epitope, where amino acid sequences are different, and internal lysine residues or internal lysine analog residues for covalent attendent of each of lipid moleties through kegr; amino group or terminal side chain group of lysine or lysine analog. The peptides are useful in eliciting the production of antibody against an antigenic B cell epitope in a subject, and are useful for antibody production, synthetic vaccine production, diagnostic method employing antibodies and antibody ligands and immunotherapy for veterinary and human medicine. The method efficiently elicits the production of antibody against antigenic B cell epitope. The present sequence represents a novel immunogenic lipopeptide comprising T helper and B cell epitopes.
                                                                                                                                                                                                                                                                                                                                                               ö

The invention relates to a binding solution (BS), comprising a 1,2-bis(2-aminophenoxy-)ethane-N,N,N',N'-tetraacetic acid (BAPTA) metal chelating part, or a phosphate-binding compound having a chemical part, linker and metal-chelating part, salt comprising trivalent metal ions and an acid.

The (BS) is useful for binding a phosphorylated target molecule in a sample, detecting an immobilised phosphorylated target molecule in a sample, detecting an immobilised phosphorylated target molecule. The (BS) is also useful in the field of proteomics, molecular biology, high throughput screening and diagnostics. The (BS) is useful for analysis and controlly of phosphorylated target molecules. The (BS) is useful for analysis and controlly of phosphorylated target molecules. The (BS) is useful for analysis and compounds of disease, and/or animal sample for diagnosis of disease, progression of disease, and/or animal sample for diagnosis of disease, progression of disease, and/or predisposition for disease. The (BS) is useful for studying biological phosphorycten status. The (BS) is useful for studying biological phosphorycten status. The (BS) is useful for studying biological phosphorycten status. The (BS) is useful for studying biological carget molecules. The (BS) is useful for generating a comprehensive phosphoryctein expression profile from any cell type or biological fluid of interest. The (BS) specifically detects, isolates and/or quantitates phosphorylated carget molecules. The (BS) allows for rapid, sensitive, and non-craft carget molecules. The (BS) allows for rapid, senset sequence correspondence of a phosphopeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       matrix assisted laser desorption ionisation-time of flight; MALDI-TOF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Binding solution useful for binding, detecting and isolating phosphorylated target molecules, comprises metal chelating part or phosphate-binding compound having chemical part, linker and metalchelating part, salt and acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Peptide ligand; proteome; capture compound; mass spectrometry; protein separation;

The present invention relates to a method for identifying drug non-target blomolecules in a mixture of biomolecules. The method comprises interacting mixture with capture compounds having moiety X which covalently binds to biomolecules with high affinity, moiety Y that increases selectivity of binding so that the capture compound binds to fewer biomolecules, and moiety Z for presenting X and Y, and analysing captured biomolecules to identify drug non-targets. The capture compound also optionally comprises a sorting function moiety Q and or a solubility function moiety W. The selectivity function moiety Y serves to modulate the reactivity function by reducing the number of groups to which the reactivity function moiety X bind, such as by steric hindrance and other interactions. Y is optionally a peptide ligand (ADR42112-ADR42256).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying drug non-target biomolecules in mixture of biomolecules involves interacting mixture of biomolecules with capture compounds having high binding affinity and analyzing captured biomolecules to identify drug non-targets.
                                                                                                                                                                                                                                                                                                                                    Siddigi SM, Grealish MP,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human mature gastrin 17 (G17) amino acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               100.0%; Score 103; DB 8;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a collection of capture compounds capable of binding to biomolecules to form complexes that are stable under mass specifications. The formulae for the capture compounds comprises sets of compounds of formula (1)-(III) given in the specification. Also included are analysis of biomolecules (by contacting a composition comprising a biomolecule with the above collection and identifying or detecting bound biomolecules, separating protein conformers (by contacting a composition comprising a biomolecule with the above collection, separating the members of the collection and identifying bound proteins), reducing diversity of a complex mixture of biomolecules (by contacting the mixture with the above collection and separating each set of complexes of capture compounds with biomolecules from the other set of complexes of capture compounds with biomolecules from the other set of complexes of each set according to a phenotype, contacting mixtures of biomolecules from each set with the above collection and comparing the patterns of biomolecule binding from each set). The comparing the patterns of biomolecule binding from each set). The comparing the patterns of biomolecule binding from each set). The comparing the patterns of biomolecule binding from each set). The comparing the patterns of biomolecule binding from each set). The comparing the patterns of biomolecule binding from each set). The comparing the patterns of biomolecules from each set with the above collection and supplies of the analysis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  biomolecules, especially proteins (e.g. analysis of a proteome), using mass spectrometry, especially matrix assisted laser desorption ionisation-time of flight (MALDI-TOF) mass spectrometry. The present sequence is an exemplary peptide ligand which may be incorporated into a capture
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Collection of capture compounds capable of binding to biomolecules to form complexes that are stable under mass spectrometry conditions, useful for analysis of biomolecules, especially proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

keratinocyte growth factor (KGF) agonist and a gastrin composition that keratinocyte growth factor (KGF) agonist and a gastrin compound that comproved beneficial effects relative to each compound alone, and comptionally a carrier, excipient, or vehicle. The composition provides custained beneficial effects, and is in a form that provides normal blood glucose levels in a subject that persist for a prolonged period of time after administration. The composition further comprises amounts of a KGF agonist and a gastrin compound in a form for chronic or acute therapy of a subject in need, where the amounts are suboptimal relative to the amount of each compound administered alone for treatment of diabetes. The certained composition is usefuled to a lose a subject in increased survival, or decreased symptoms of a disease or condition, and/or are sustained beneficial effects that composition is useful for the preparation of treatment.

The composition is useful for the preparation of a medicament for the treatment of a condition or disease, such as dyslipidaemia, severe hypoglycaemic episodes, stroke, left ventricular hypertrophy, arrhythmia, bacteraemia, septicaemia, irritable bowel syndrome, functional dyspepsia, diabetes, catabolic changes after composition, impaired glucose tolerance, hypertension, Altheimer's disease and other central and peripheral neurodegenerative conditions, chronic conditions, and disorders and obesity. The composition is also used to be promote and/or enhance soft tissue growth and regeneration, such as in the print of and other central and obesity. The composition is also used to be promote and/or enhance soft tissue growth and regeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                          New pharmaceutical composition comprising a keratinocyte growth factor (KGF) agonist and a gastrin compound, useful in treating or preventing diabetes, hypertension, heart failure and obesity.

                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to determining the total amount of gastrin or free gastrin hormone in a biological fluid sample. The method involves (a) obtaining a biological fluid sample comprising a gastrin hormone from a patient; (b) providing an immobilized antibody that selectively binds a C terminal epitope of the gastrin hormone; (c) incubating the sample in the principle of the gastrin hormone in the sample to the antibody to produce an immobilized complex of the antibody bound to the gastrin hormone in the sample to the antibody to produce an immobilized complex of the antibody bound to the gastrin hormone gastrin peptide, and incubating the complex with a detectable marker-conjugated antibody that selectively binds an N-terminal epitope of gastrin hormone to form an immobilized detectable asker-conjugated antibody that selectively binds an N-terminal epitope of gastrin hormone to form an immobilized detectable conflex with a selective datable marker-conjugated antibody complex; (e) washing the immobilized complex with a cdevelopment reagent; and (f) measuring the developed reagent to determine sample. The C-terminal selective antibody and the N-terminal selective antibody and the N-terminal selective antibody and the N-terminal selective antibody bind (3). The method is cuseful for detecting and/or quantifying free or total amount of gastrin-formone peptides including antibody-bound, in a biological fluid. The constant sequence represents the amino acid sequence of mature G17, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                        Determining total or free amount of gastrin hormone in a biological fluid sample comprises incubating the sample in the presence of an N-terminal sequence gastrin peptide for binding to a C-terminal specific antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The invention relates to a pharmaceutical composition (I) comprising a gastrin compound (CI) having an extended activity upon administration to comparison with native gastrin. (I) or CI is useful for treating a subject having diabetes, which involves administering CI or a modified gastrin capable of covalently reacting with a serum protein, where the frequency of administering the gastrin compound is less than frequency of administering the gastrin. The method further involves measuring a physiological indicator of islet neogeness.

CI involves measuring a physiological indicator of islet neogenesis, measuring fastrin comprises a sequence of mative gastrin capable of the mainting to the gastrin comprises a sequence of an extended period of binding to the gastrin serum level compared with the serum level of compared with the serum level of administering CI. (I) Contains gastrin compositions having longer active curculation than native gastrin peptides, and has a longer half-life in circulation in a subject. This sequence corresponds to the wild type corresponds to the wild type corresponds to the sequence differs gastrin-life in the invention. (Note: this sequence Listing of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel pharmaceutical composition comprising a gastrin compound having an extended activity, upon administration to a subject, in comparison with native gastrin. The compounds of the invention may be useful for treating a subject having diabetes. This fasting blood glucose (FBG). The method further involves decreasing finsulin dependency. Furthermore, the compounds may be useful for maintaining an increase in gastrin serum level for an extended period of time. The current sequence is that of the human gastrin-17 wild-type peptide of the invention which may act as a stimulator of the gastrin or

This invention describes novel imidazo[1,2-a]pyrazin-8-ylamine derivatives and their salts, solvates, crystal forms, diastereomers and derivatives and their salts, solvates, crystal forms, diastereomers and derivatives and escribes 1) a method for identifying a contacting modulation of an activity of a kinase and 2) a derivative and detecting modulation of an activity of a kinase and 2) a method for identifying atk comprising contacting the organism cell or preparation comprising the contacting kinase with a imidazo[1,2-a]pyrazin-8-ylamine derivative and detecting modulation of an activity of Btk. The derivatives can be used for the treatment of cancer when administered derivatives can be used for the treatment of cancer when administered controlly at least one antitumor therapeutic gracer when administered derivatives are useful for manufacture of a medicament for the treatment of kinase (Btk) implicated condition, preferably cancer, an autoimmune cand/or inflammantory condition, in a mammal (preferably human, dog or cat). The derivatives are also useful to treat conditions, diseases and/or disorders such as psoriasis, cancer (especially chronic prostate cancer such as psoriasis, cancer (especially chronic prostate cancer such as bormonal refractory prostate cancer, kidney cancer, bead and neck cancer or colorectal cancer, immunoregulation (e.g. graft rejection), atherosclerosis, rheumatoid arthritis funding and (e.g. graft rejection), atherosclerosis, rheumatoid arthritis funding and such as oral bhoavalability, low toxicity, low serum protein binding and desirable in vitro and in vivo half-lives. This sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New imidazo(1,2-a)pyrazin-8-ylamine derivatives, useful to treat e.g. cancer, autoimmune condition, inflammatory condition, psoriasis, atherosclerosis, Parkinson's disease, diabetes and septic shock, are
graft rejection; atherosclerosis; Alzheimers disease; diabetes; diabetic retinopathy; insulin resistance; rheumatoid arthritis; Parkinson's disease; septic shock.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method for isolating a phosphorylated target molecule in a sample. The method involves incubating sample and binding solution and separating phosphorylated target molecules from unphosphorylated molecules by chromatography. The invention is useful in the field of proteomics, molecular biology, high-throughput screening and diagnostics. The present sequence is the non-phosphopeptide used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolation of phosphorylated target molecule in sample useful in field of e.g. proteomics, involves incubating sample and binding solution, and separating phosphorylated target molecules from unphosphorylated molecules by chromatography.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      imidazo[1,2-a]pyrazin-8-ylamine; kinase; Btk kinase; cancer; neoplasm; cytostatic; immunosuppressive; antinflammatory; antipsoriatic; immunosuppressive; antinflammatory; antiheuratic; antiparkineonian; neuroprotective; nootropic; antidiabetic; antibacterial; antitumor; immune disorder; autoimmune disease; inflammation; psoriasis; chronic myelocytic leukemia; gastrointestinal tumor; lung tumor; breast tumor; ovary tumor; prostate tumor; renal tumor; head and neck tumor; colorectal tumor;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to pyrazine derivatives and their prodrugs, salts, hydrates, solvates, crystal forms and diastereomers. The pyrazine derivatives are useful for treating tyrosine kinase-associated diseases involving janus kinase (JAK) JAK2, JAK3 or TYK2 (particularly atopy, cell mediated hypersensitivity, rheumatic diseases, other autoimmune diseases/viral diseases, cancer, neurodegenerative diseases and cardiovascular diseases), in medicaments for treating JAK-associated disease states and for treating diseases and conditions associated with inflammation and infection. This sequence represents a kinase biotinylated substrate peptide used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              pyrazine derivatives are protein tyrosine kinase inhibitors useful at e.g. rheumatic diseases, atopy, other autoimmune diseases/viral asses, cancer, inflammation, neurodegenerative diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 100.0%; Score 103; DB 9; Length 17; 100.0%; Pred. ```
The present invention relates to novel indole-containing derivatives that act as protein kinase inhibitors. These compounds are useful for act as protein kinase inhibitors. These compounds are useful for treating: cancer (e.g. non small-cell lung, badder, head, neck, ovarian, prostate, breast, colorectal, small-cell lung, genitourinary, gastrointestinal cancer, squamous cell carcinoma, astrocytoma, Kaposi's carcoma, glioblastoma, melanoma or glioma); inframmation, inflammatory bowel disease, psoriasis, or transplant rejection; for preventing or treating dementia related diseases (e.g. frontotemporal dementia, disease, which associated neurofibrillar tangle pathologies, predemented constants and dementia, dementia with Lewy bodies, frontotemporal dementia and dementia bugilistica), Albeimer's disease and conditions associated with kinases; for preventing or treating amyotrophic lateral cassociated with kinases; for preventing or treating amyotrophic lateral cassociated with kinases; postencephelatic parkinsonis, progressive cupranuclear palsy, Pick's disease, Niemann-Pick's disease, stroke, head trauma and other chronic neurodegenerative disease, bipolar disease, caffective disorders, depression, schizophrenia, cognitive decline, cognitive medication, mild cognitive decline, age-related cognitive decline, late-life forgetfulness, memory impairment and androgenetic alopecia, or for treating arthritis (all classined). The present sequence is that of a peptide used in a time-creative indicated alopecia, or for treating arthritis (all classined). The present sequence energy transfer detection method to determine inhibition of protein kinase c-kit by indole-containing companied companied.
                                                                                                                                                                                                                                                                    vulnerary;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Tennant MG;

The present invention relates to an affinity-binding assay for selecting antigen specific immune cells. The method involves contacting particle such as a cell having four copies of target molecule with two binding molecules specific for the target molecule, where first of the binding molecules is associated with a first label and a second of the binding molecules is associated with a second label, detecting cells staining with each label and selecting cells binding both labels. The invention also provides a method for detection of early B cell populations in vaccine development. The invention is useful for the preparation of an antibody. The present sequence is a gastrin peptide. This sequence is an immunogenic peptide used as a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Affinity-binding assay for selecting antigen specific immune cells, by contexting cell having four copies of target molecule with two labeled binding molecules, detecting cells staining with each label, selecting cells binding both labels.
